

Deer Guard Program

Deer and Rabbit Damage Protection for evergreens, shrubs, perennials, trees and other desirable landscape material. Each application resists wash off by rain and snow with long lasting results.

Our program includes two targeted applications to protect plant material:

Deer-Scram Granular Repellent: An all organic professional granular repellent placed around sensitive perennials and annuals to deter deer from feeding. Each application is long-lasting and resists rain for up to 30 days.

Liquid Fence Deer and Rabbit Repellent: Liquid Fence® Deer & Rabbit Repellent Concentrate₂ works on scent, so deer and rabbits don't even have to take a bite to be repelled. Harmless to plants and animals, and resistant to rain. Our liquid treatment focuses on shrubs and taller ornamentals where granular products can't reach.

Treatment Plan: With each monthly application your Technician will treat all shrubbery, trees, perennials and annuals with a *Professional Grade Deer Repellent* product.

This year, Deer will cause millions of dollars in landscape damage.... damage that can be prevented.
